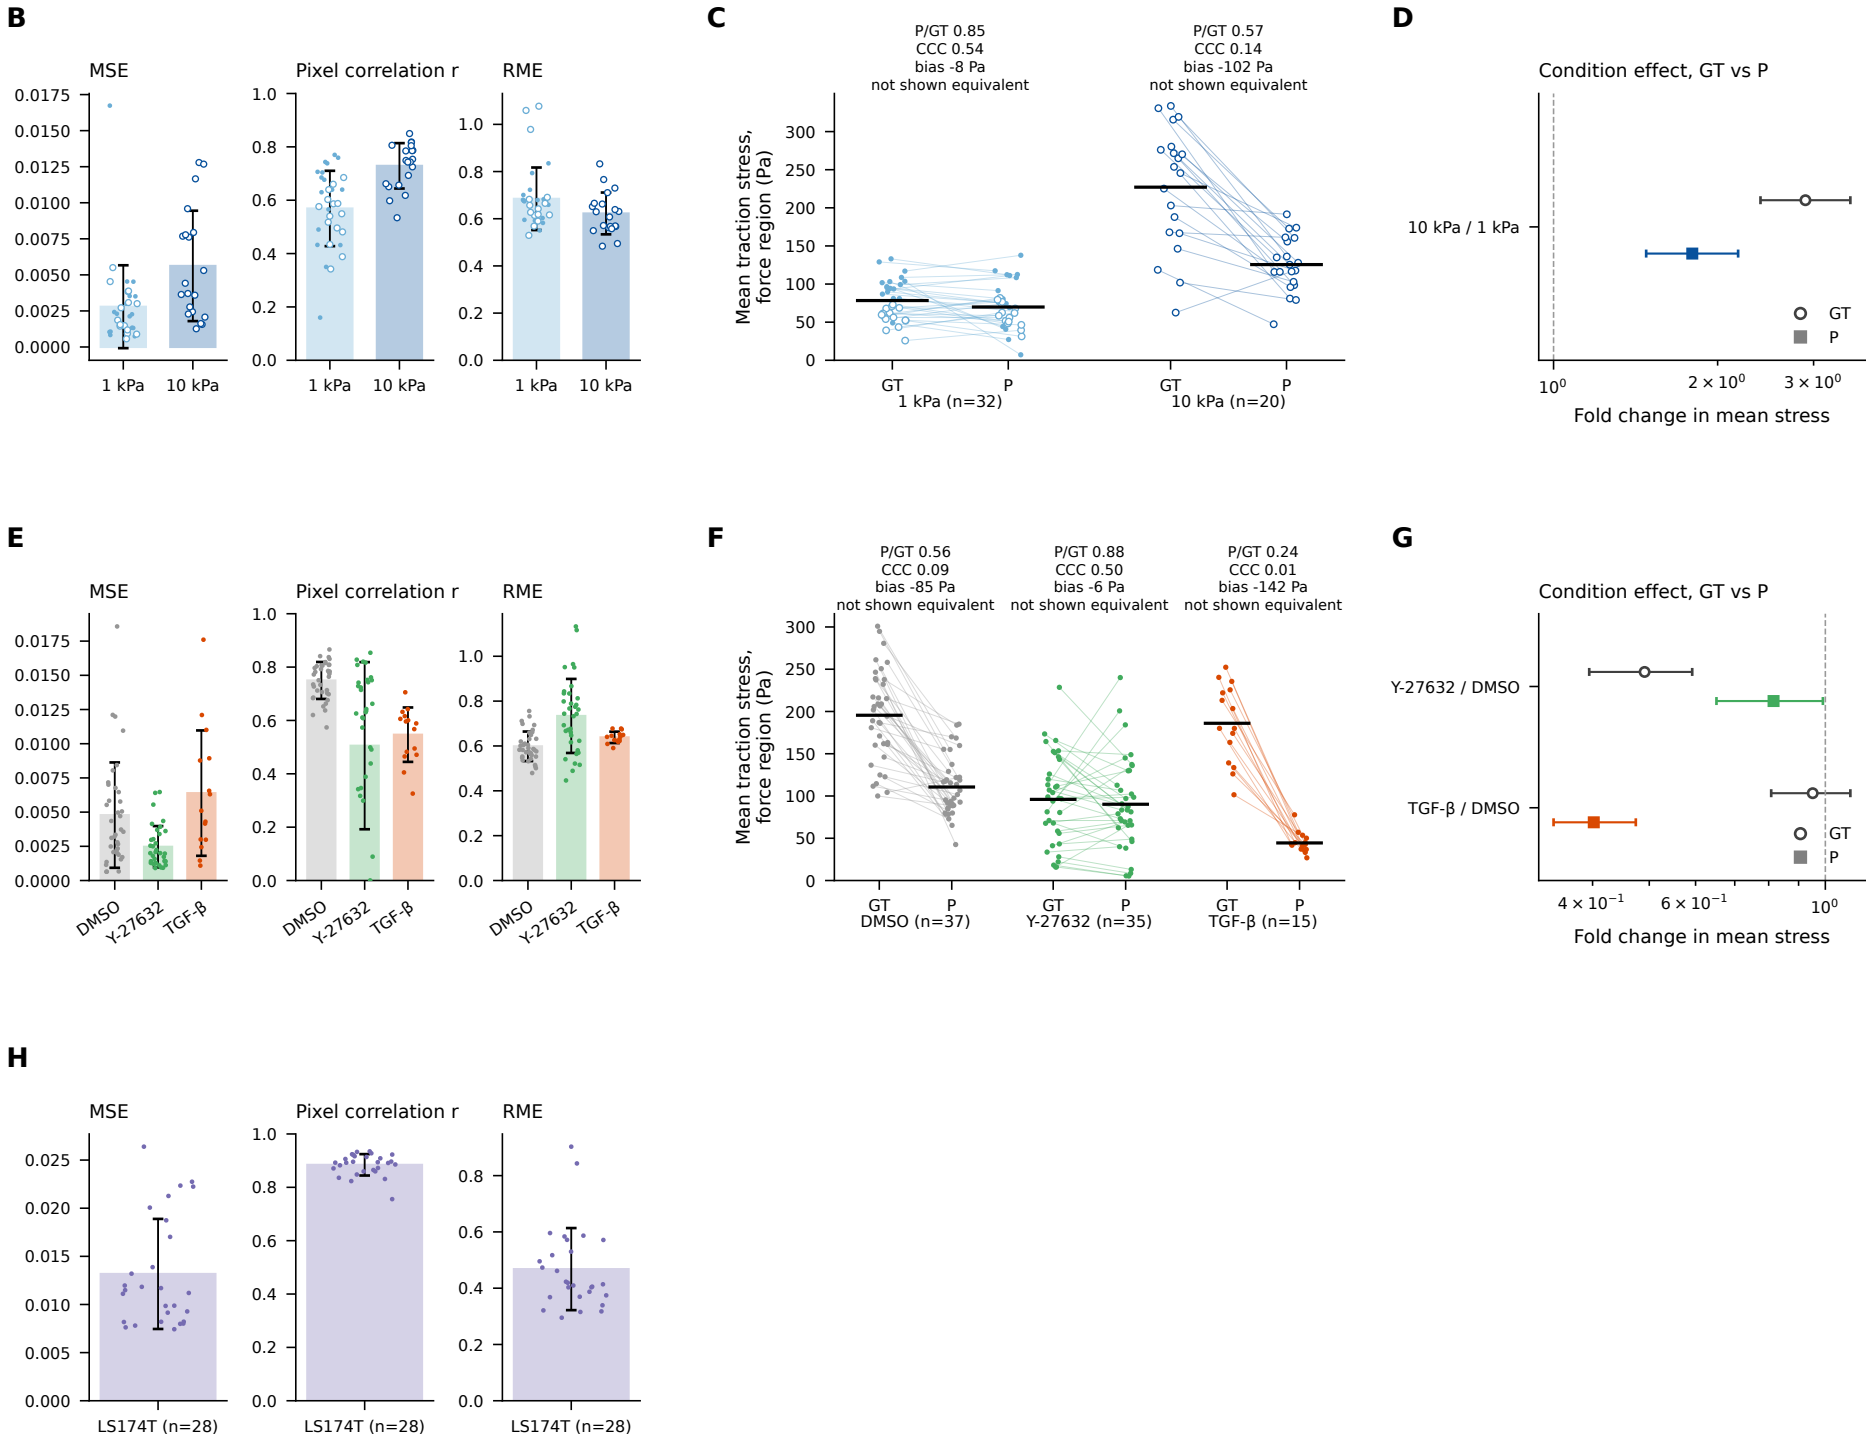

Fig. 3 (held-out images): Released S2F (BF + substrate channels, 6 kPa reference setting)

Held-out images only (no training images). Filled dots: test images; open dots: validation images (1 kPa SET I&II; 10 kPa SET I, no 10 kPa test set exists). Position_08 excluded (same image in DMSO SET II and Y-27632 SET II).
Stress = mean traction stress in the force region detected on the GT map (web-app detector), same region for GT and P. P/GT = geometric mean ratio; CCC = Lin's concordance; bias = Bland-Altman mean difference; equivalence = TOST on log(P/GT), margin 0.80-1.25. Effects: ratio of group means, bootstrap 95% CI. H: released spheroid GN model, 28 validation spheroids.
